

Medical Emergencies:

If you think your child is having a life-threatening medical emergency, call 911.

If you feel your child may be seriously ill but not in immediate danger go to the closest emergency department (not urgent care). If possible, call us first – 462-5401 – so we can determine how serious your child’s illness is.

For fever, including “high” fever (<105 degrees), please first consult the file “All About Fever” on the 4th page of this website to see how to handle this.

For questions about possible toxic ingestions call Poison Control - 1-800-222-1222 - first. You may then call us if you like.
